

# FDA/SCB Webinar: CBER's Consensus Standards Recognition Program

Dawn Henke  
Executive Director

February 21, 2024  
Standards Coordinating  
Body

# Webinar Agenda

Time	Discussion Topic
11:05 am – 11:10 am	Welcome
11:10 am – 11:40 am	Standards basics/ resources
11:40 am – 12:00 pm	CBER VCS recognition program
12:00 pm – 12:10 pm	Initial list of recognized standards
12:10 pm – 12:55 pm	Discussion and Questions
12:55 pm – 1:00 pm	Wrap-up

# Welcome

Welcome and thank you for your involvement and participation in this webinar. All participation and views are welcome and appreciated. This an exciting opportunity for us to share about the new CBER standards recognition program and allow for questions and discussions.

# Goals of the Webinar

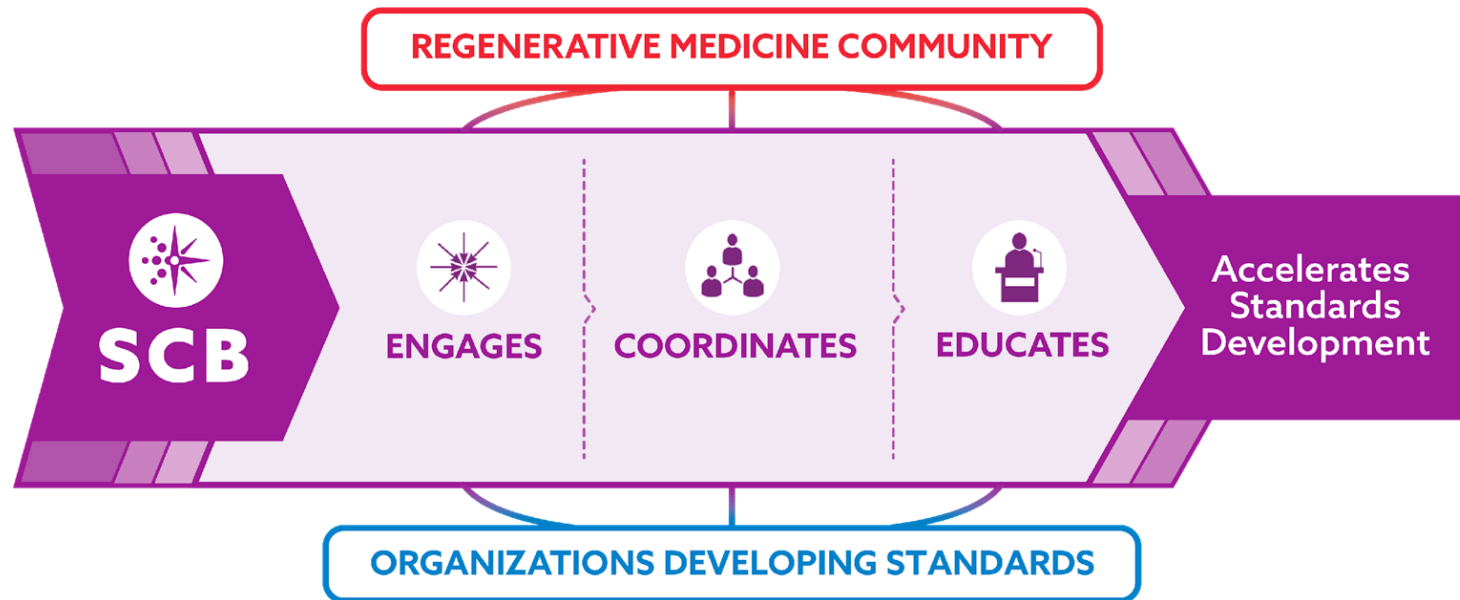

The goal of the Standards Development Forum is to bring together organizations involved in regenerative medicine in order to educate about the new VCS recognition program for regenerative medicine.

This forum is intended to facilitate conversation around this topic and allow for a better understanding of how to use standards in your approval process and awareness of resources for the public to find and understand standards.

# Webinar Expectations

- Everyone has the opportunity to ask questions in the second half of the webinar of both SCB and FDA
- Please send questions to Dawn Henke in the chat
- Please raise your hand if you would like to speak
- Please mute yourself when you are not speaking

# Connecting the regenerative medicine community to standards development

Established in 2016 and launched in January 2017, SCB is an **independent 501(c)(3)** organization

Occupies unique niche within field with **no vested interests in specific scientific, commercial, clinical or policy approaches**

SCB is **not an SDO**, but rather **coordinates** the standards development process

Serves as **communication vehicle** among all stakeholders, including government agencies, critical to the development of standards

# Bringing value to patients and the community

**MISSION:** Coordinate the accelerated advancement and improved awareness of standards and best practices that address the rapidly evolving needs of the global regenerative medicine advanced therapy community

**VISION:** Improve patient lives through the widespread use of standards that enhance the consistency, availability, efficacy, quality, and safety of regenerative medicine therapies

# Standards Recognition Program

# Regulations, Guidances, and Standards

## Regulations:

**Have the force and effect of law and are usually mandatory**, setting out specific requirements that regulated products and organizations must meet. In the United States, regulations are written in the Code of Federal Regulations and published in the Federal Register.

## Guidances:

Formal documents issued by a government agency **to clarify** the agency's **thinking on existing laws or regulations** and offer guidelines for how industry **can comply with these regulations**.

## Standards:

**Voluntary rules**, conditions, characteristics, or physical materials that an organization can adopt to make a process safer, more efficient, or better aligned with the practices of other organizations in their industry.

Different standards types include:

- **Documentary Standards**
- Standard Reference Material
- Standard Reference Data

# Regulatory perspective on standards

- Regulatory have clearly expressed the preference for the use of consensus based standards in the approval process when applicable

## **Voluntary Consensus Standards Recognition Program for Regenerative Medicine Therapies**

---

### **Guidance for Industry**

# Standards Resources

# Regenerative medicine standards portal

- [Portal.standardscoordinatingbody.org](https://portal.standardscoordinatingbody.org)
- Launched publicly in March 2021
- Interactive database of easily searchable information on published standards, in-development standards, and areas of need for the regenerative medicine community

**Search Filters**

53 AREAS OF NEED

ORGANIZATION	DESIGNATIONS	ID	TITLE	STATUS	TYPE
+ ASTM International	✓	ASTM F2149-16	Standard Test Method for Automated Analyses of Cells—the Electrical Sensing Zone Method of Enumerating and Sizing Single Cell Suspensions	Published 2016	Documentary

- ASTM International ✓ ASTM F2149-16 Standard Test Method for Automated Analyses of Cells—the Electrical Sensing Zone Method of Enumerating and Sizing Single Cell Suspensions Published 2016 Documentary

Applicable Sector(s): Cell Therapy

Functional Area(s): Analytical and Testing Methodologies, Product Quality and Characterization

Description: This test method, provided the limitations are understood, covers a procedure for both the enumeration and measurement of size distribution of most all cell types. The instrumentation allows for user-selectable cell size settings and is applicable to a wide range of cell types. The method works best for spherical cells, and may be less accurate if cells are not spherical, such as for discoid cells or budding yeast. The method is appropriate for suspension as well as adherent cell cultures.

Additional Keywords: Automated Cell Counters, Cell Culture, Cell Size, Counters And Detectors, Cultivation, Electrical Sensing Zone Technique, Size, Size Distribution

Updates and Calls to Action: A revision of this standard is underway.

Availability: <https://www.astm.org/Standards/F2149.htm>

FDA Recognized: Recognized by the [FDA CBER Voluntary Consensus Standards Recognition Program for Regenerative Medicine Therapies \(SRP-RMT\)](#)

# Needed regenerative medicine standards

*To provide feedback for the next update, please fill out the needed standards survey.*

In order to create standards that are impactful and needed by the field we need to coordinate and devote resources to getting these standards developed

It is important to identify gaps in standards that can be filled so that we can ensure these standards that will advance the field are created

Some of these standards that will be created based off these needs could become part of the SRP-RMT

The needed standards survey can be found at: <https://www.standardscoordinatingbody.org/needsurvey>

# Needed regenerative medicine standards

To provide feedback for the next update, please fill out the needed standards survey.

Based on the feedback, the chart below is updated semi-annually to reflect the community's prioritization perspectives.

[TAKE THE SURVEY](#)

Currently we are collecting responses for the update as part of the FDA contract. The most recent updates were reflected in 11/23

The needed standards survey can be found at: <https://www.standardscoordinatingbody.org/needsurvey>

# ANSI Packages for Recognized Standards

SCB has curated five new ANSI packages:

1. CBER Voluntary Consensus Standards Recognized: Cell Characterization
2. CBER Voluntary Consensus Standards Recognized: Sequencing
3. CBER Voluntary Consensus Standards Recognized: Cryopreservation and Storage
4. CBER Voluntary Consensus Standards Recognized: Scaffolds
5. CBER Voluntary Consensus Standards Recognized: Full List

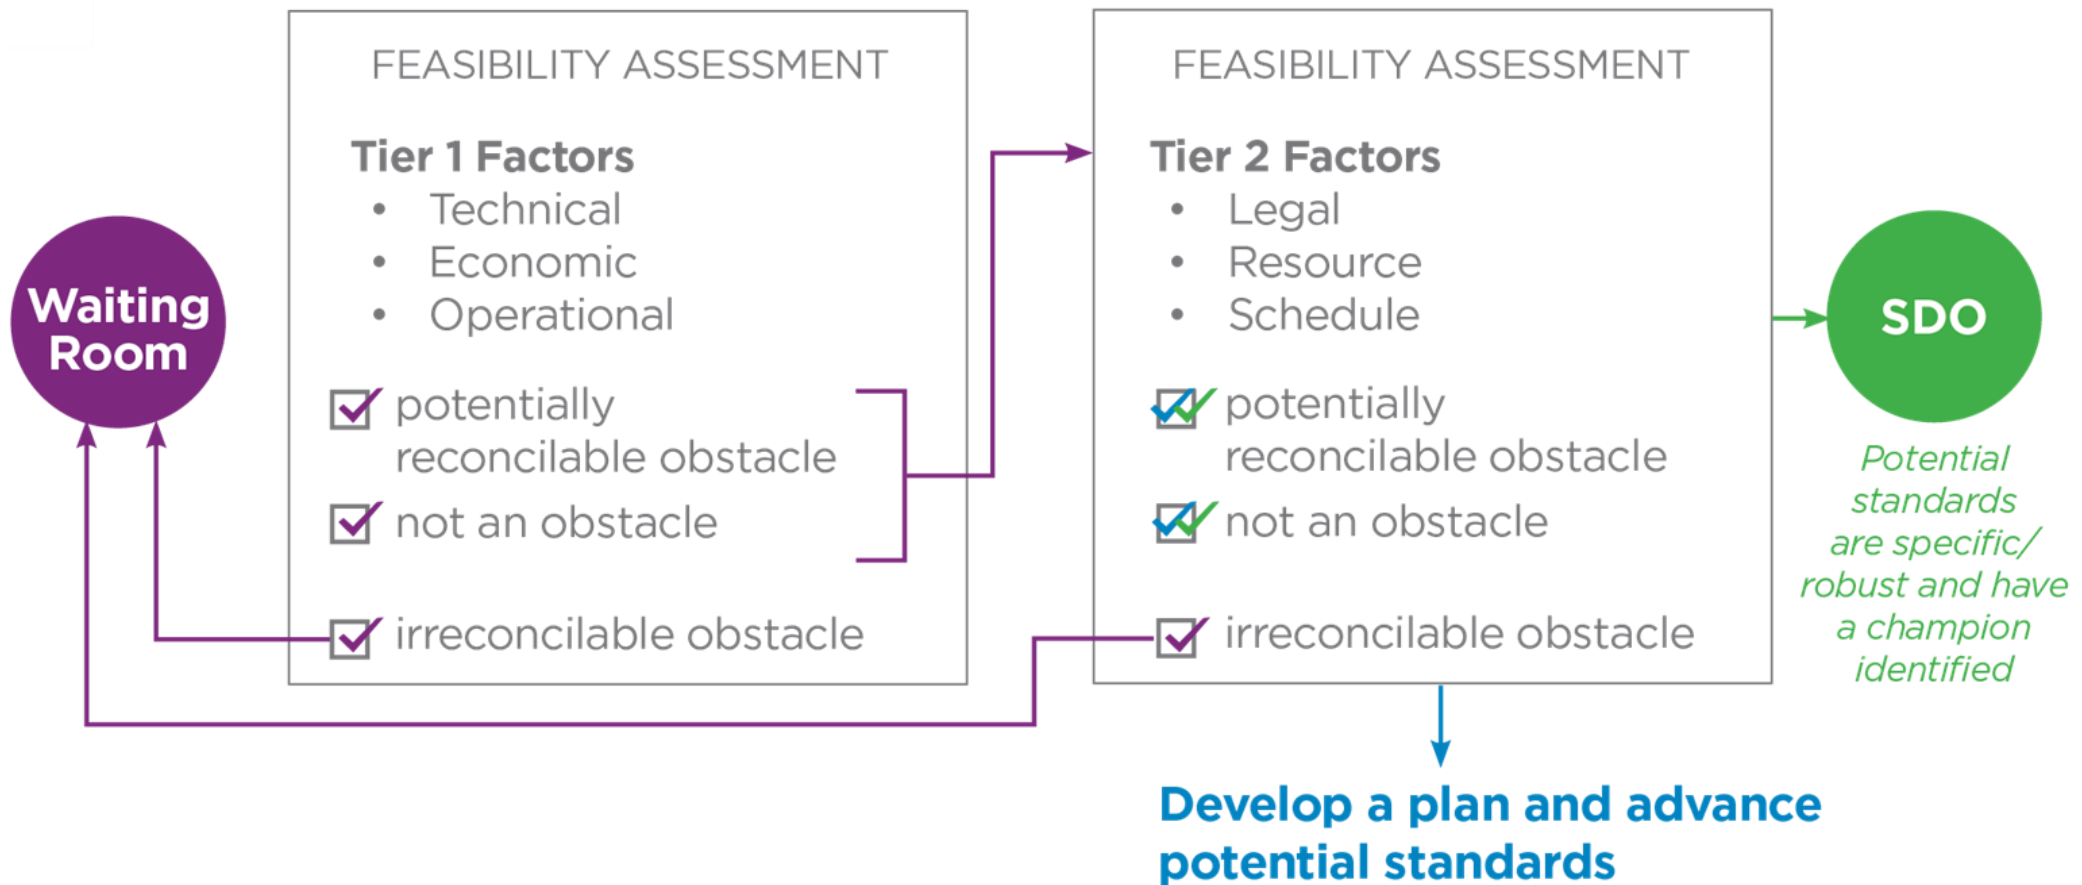

Once the packages are published, they will be available here:

<https://www.standardscoordinatingbody.org/regen-med-standards-packages>

# Feasibility Assessment Plan

## Conduct Feasibility Assessment

# Opportunities to Impact Standards Development and Implementation

# New Working Groups

SCB, FDA, and USP co-organized a 2-day workshop to build on the results of two December 2022 feasibility assessments to identify specific topics that are feasible to standardize and would make a significant positive impact on the regenerative medicine field. More information can be found here, as well as a full workshop report: <https://www.standardscoordinatingbody.org/release-standards-needs-identification-workshop>

Two new working groups will be formed based on this workshop and feasibility assessment

- Empty, Full, Partial capsid characterization
- Killing assays for CAR-T products

To learn more or sign up for the upcoming working groups please fill out this survey: <https://www.surveymonkey.com/r/Feb2024workinggroups>

# Open Ballots and Updates

1. ISO certificate of analysis: currently drafting. Submitting initial comment period in early February
2. Framework for cryopreservation: currently drafting. Submitting initial comment period in early February
3. PDA Cell Collection: PDA and the Task Force for this effort are actively drafting the standard
4. Patient Data Management: Working group has started developing standard
5. ISO Cell Viability: Current draft is available for review
6. ISO Minimum Requirements for Cellular Morphological Analysis — Image capture, image processing, and morphometry. At stage for final technical comments before publication.
7. ISO Packaging: Published
8. ISO cell line authentication: Published
9. ISO Nucleic Acid Synthesis — Part 2: General definitions and requirements for the production and quality control of synthesized gene fragment, gene, and genomes: Final stages before publication
10. ISO Gene delivery systems — Part 1, 2, and 3 – Passed NP Ballot, Looking for experts to engage for comment

# Education Updates

# Workforce Development Course Update

## **Pilot training program** for standards:

SCB is designing and implementing a pilot training program (with ARMI | BioFab USA) to help manufacturers to avoid/minimize many of the common front-end issues of the manufacturing process.

**ISO Cell Counting Part 1&2:** The course has been launched through ISCTs platform.

**ISO Ancillary Materials:** Recruiting additional SMEs to assist with the creation of course content.

If interested in serving as a subject matter expert or to contribute case studies, please contact Katie at [CZander@regenmedscb.org](mailto:CZander@regenmedscb.org).

# ISO Cell Counting Implementation Course

## THE IMPLEMENTATION OF CELL COUNTING STANDARDS

*A Partnership between ISCT & SCB*

### ABOUT THE COURSE

The Implementation of the ISO Cell Counting Standards course is a partnership between ISCT and the Standard Coordinating Body (SCB). This course was developed with input from the Subject Matter Experts (SMEs), including **NIST, FDA, and device manufacturers**, who created the ISO 20391-1:2018 (Part 1) and ISO 20391-2:2019 (Part 2) Standards.

This course will give you a fundamental understanding of cell counting terminology, methods, reporting, processes for cell counts, sample selection, and data analysis. You will learn from experts how to apply the principles of quality indicators for evaluating the quality of a cell counting measurement process. **As part of the course, you will receive an electronic copy of ISO 20391-1:2018 (Part 1) and ISO 20391-2:2019 (Part 2) Standards.**

At the end of the course, you will be confident in implementing ISO

# Focus Areas

Since our inception in 2017, SCB has accelerated the advancement of 34+ standards. But we need additional community support to respond to the interrelated challenges facing the regenerative medicine field. To address this need we have developed SCB Focus Areas.

The first two Focus Areas are:

1. Standards Implementation Education and Workforce Development
2. Data Management

Donor Benefits Include:

- SCB's formal recognition of your contribution in meetings and media
- A seat on the Focus Area's Steering Committee
- Discounted course registration for your employees

# Focus Areas

## Standards Implementation Education and Workforce Development

### KEY CHALLENGE:

Standards can only benefit the community if there is broad understanding of how to implement them to meet regulatory expectations.

### FOCUS AREA SOLUTIONS:

Develop courses on how to use specific regenerative medicine standards to demonstrate regulatory compliance and improve the efficiency and repeatability of internal processes.

## Data Management

If interested in learning more about SCB Focus Areas, please contact Justin at [JBarch@regenmedscb.org](mailto:JBarch@regenmedscb.org).

### KEY CHALLENGE:

Variability in data management practices and manufacturer requirements are common pain points for collection centers and can even overburden staff to the point of limiting their capacity to support clinical trials of potentially lifesaving therapies.

### FOCUS AREA SOLUTIONS:

Identify common data needs and approaches to streamline data management practices.

# Stay up to date on standards

Follow us on social media to stay up to date on news surrounding regenerative medicine standards, including webinars, FDA guidance documents, NIST consortium opportunities, open ballots, and new working groups.

# Purpose of the SRP-RMT

## Promote

Promote the development of standards that facilitate product development and streamline the review of RMT products

## Identify

Identify standards that have been reviewed by FDA for scientific soundness and consistency with FDA regulations and policies.

## Assist

Assist stakeholders and FDA reviewers in evaluating the proper use of a standard (fit-for-purpose) in a regulatory submission.

# Types of Standards Reviewed for Recognition

- Only standards produced by Voluntary Consensus Bodies (VCSB) will be reviewed for recognition
- Processes that follow openness, balance, consensus, and due process
- Examples:
  - ATCC - American Type Culture Collection
  - ASTM - American Society for Testing Materials
  - IEEE- Institute of Electrical and Electronics Engineers
  - ISO - International Organization for Standardization
  - PDA - Parenteral Drug Association
  - CLSI - Clinical and Laboratory Standards Institute
  - Others

# Standards Not Reviewed in the SRP-RMT but may be used in Regulatory Submissions for RMTs

## Pharmacopeial standards

- Examples: US Pharmacopeia, Japanese Pharmacopeia, European Pharmacopeia

## Accreditation standards

- Standards set forth by accreditation organizations to ensure that certain criteria are met for a specified process or system.
- Examples: Foundation for the Accreditation of Cellular Therapy (FACT), Association for the Advancement of Blood & Biotherapies (AABB)

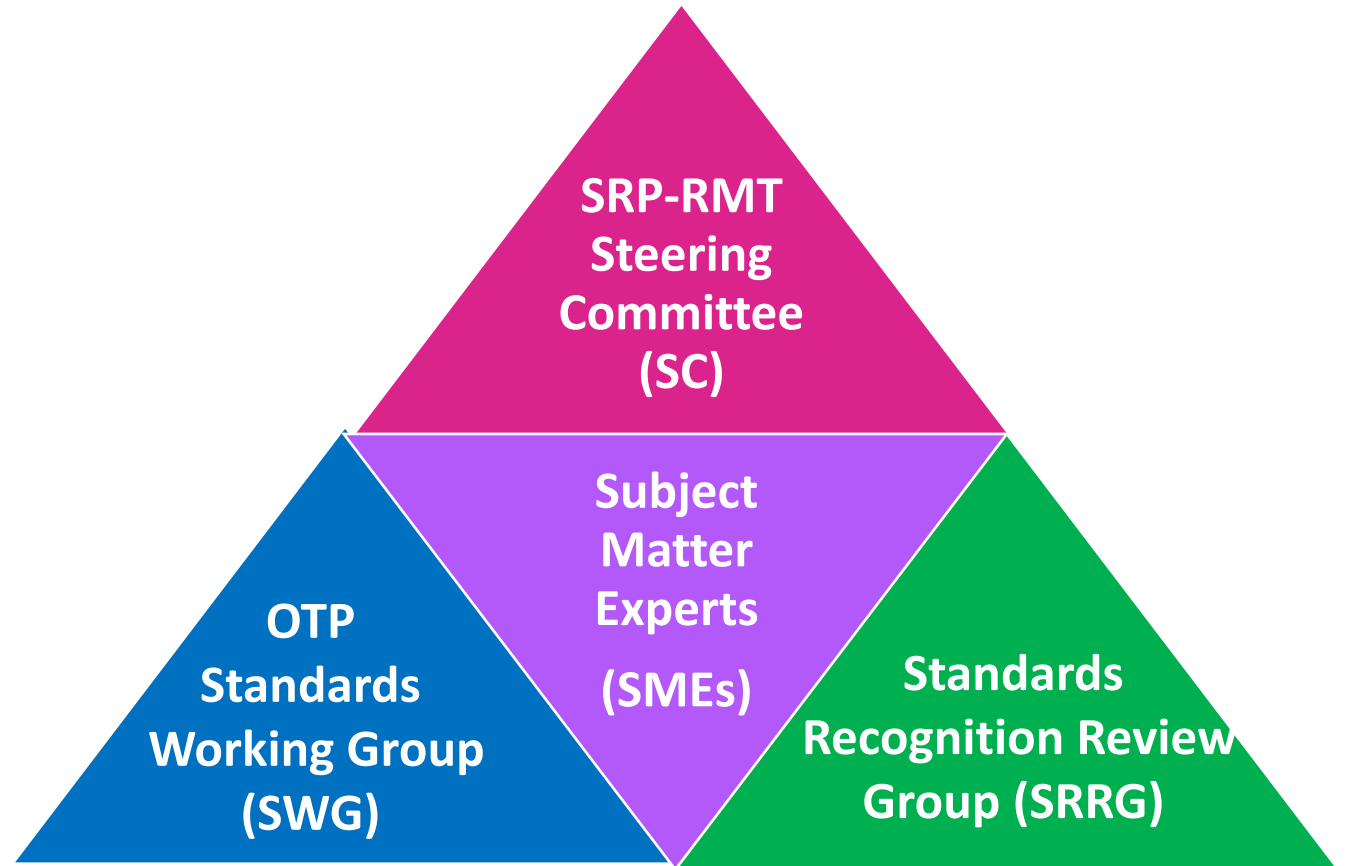

## Standards created by institutions or societies

- Examples: International Society for Stem Cell Research (ISSCR), International Society for Cell & Gene Therapy (ISCT)

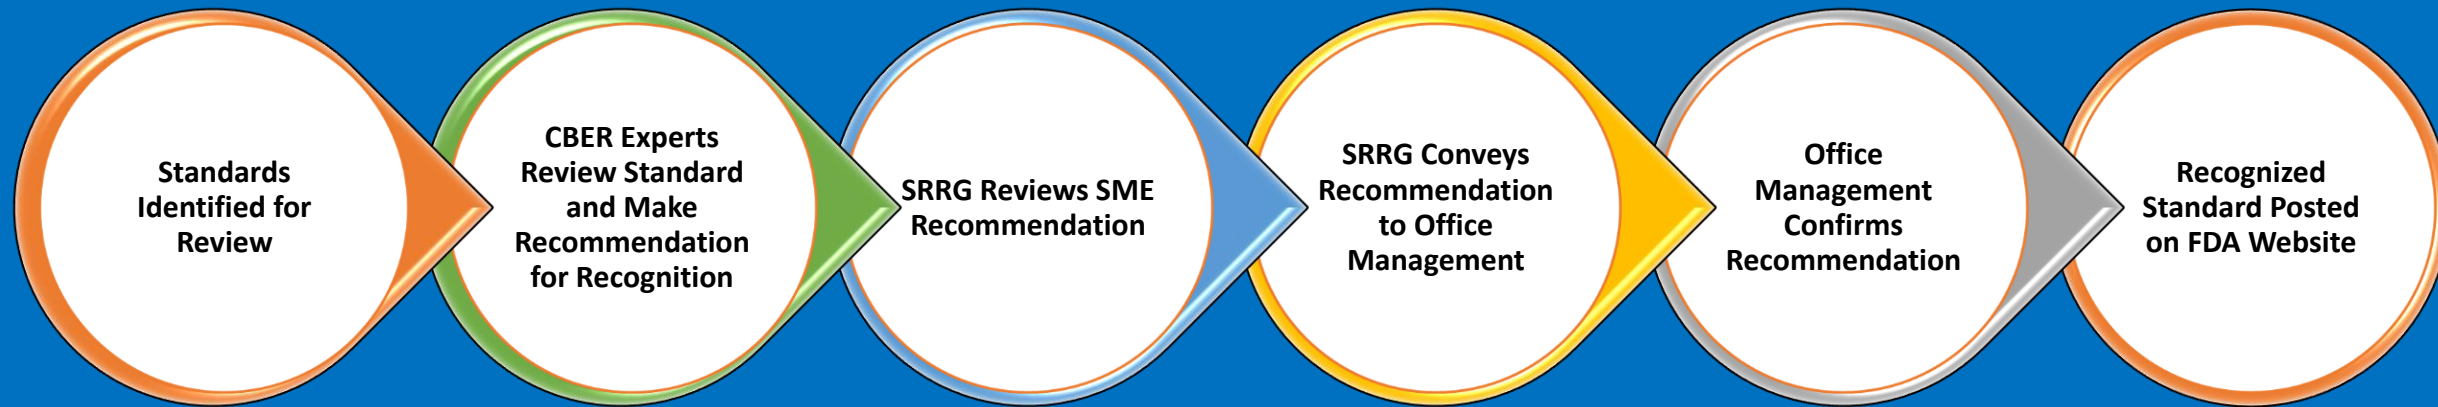

# CBER Office of Therapeutic Products (OTP) SRP-RMT Teams

OTP is responsible for management of the SRP-RMT

- SC: Develop policy and processes
- SWG: Identify standards to be reviewed
- SMEs: Evaluate standards for recognition based on specified criteria
- SRRG: Discuss SME recommendations, vote on level of recognition

# SRP-RMT Standards Review Process

## Levels of Standard Recognition

---

FDA subject matter experts will evaluate standards for:

- Complete Recognition - the entire content of the standard is recognized
- Partial Recognition - only portions of the standard are recognized
  - FDA will identify the section(s) of the standard that are recognized.
- Non-recognition – the standard does not meet the criteria for recognition

# Criteria for Evaluating Standards for Recognition

**THE STANDARD WAS DEVELOPED BY A VCSB**

**THE STANDARD DOES NOT CONFLICT WITH CURRENT FDA STATUTE, REGULATIONS, OR POLICY**

**THE STANDARD IS SCIENTIFICALLY SOUND**

**THE STANDARD MAY FACILITATE THE ABILITY OF A SPONSOR TO MEET REGULATORY EXPECTATIONS**

**THE STANDARD CAN ASSIST FDA IN THE ASSESSMENT OF A REGULATORY SUBMISSION FOR RMT PRODUCTS**

How will stakeholders know if a standard has been recognized?

- Recognized standards will be posted on the Standards Development for Regenerative Medicine Therapies page on the FDA website twice/year  
<https://www.fda.gov/vaccines-blood-biologics/standards-development-regenerative-medicine-therapies>
- Recognized standards will be accompanied by a Standards Recognition Sheet (SRS) that defines the terms of recognition

# CBER Voluntary Consensus Standards Recognition Program for Regenerative Medicine Therapies

Last updated on November 28, 2023

Recognition Number	SDO	Designation ID	Year	Title	Recognition Status	Standard Recognition Summary (SRS)
001	ASTM	F2944	2020	Standard Practice for Automated Colony Forming Unit (CFU) Assays—Image Acquisition and Analysis Method for Enumerating and Characterizing Cells and Colonies in Culture	Complete Recognition	<a href="#">Rec 001</a>

# CBER Standards Recognition Program for Regenerative Medicine

## Standards Recognition Summary

**Recognition Number:** 001

**Date of Recognition:** 03/17/2023

**SDO Name/Designation:** ASTM F2944

**Year of Publication:** 2020

**Title:** Standard Practice for Automated Colony Forming Unit (CFU) Assays – Image Acquisition and Analysis Method for Enumerating and Characterizing Cells and Colonies in Culture

**Scope:** 1.1 This practice, provided its limitations are understood, describes a procedure for quantitative measurement of the number and biological characteristics of colonies derived from a stem cell progenitor population using image analysis.  
(19 additional clauses are in the scope of this document.)

**Extent of Recognition:** Complete Recognition

**Rationale for Recognition:** This standard is relevant to regenerative medicine therapies and is recognized because it is scientifically and technically valid and does not conflict with existing regulations and policy.

**Standards Development Organization:** <https://www.astm.org>

Please note that this standard may also be recognized under the Center for Devices and Radiological Health's *Recognized Consensus Standards Database for Medical Devices*, found here <https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfStandards/search.cfm>

# Citation of a Standard in a Regulatory Submission (Example)

**SDO Name/Designation:** ASTM F2944

**Year of Publication:** 2020

**Title:** Standard Practice for Automated Colony Forming Unit (CFU) Assays – Image Acquisition and Analysis Method for Enumerating and Characterizing Cells and Colonies in Culture

## **Possible sponsor statements in a submission:**

The standard was used as written to count cell colonies derived from Hematopoietic Stem Cells (HSC).

**OR**

The method described in the standard was optimized for 2D cultures. The optimization protocol is provided in this submission.

# SRP-RMT Guiding Principles

---

- The use of standards in a regulatory submission is not required.
- Most standards, including those that do not meet the definition of voluntary consensus standard can be used if fit-for-purpose.
- Use of a standard does not preclude FDA from asking for additional information to support the regulatory evaluation of a product.
- Stakeholders may request a standard be reviewed for recognition by email: [SRP-RMT@fda.hhs.gov](mailto:SRP-RMT@fda.hhs.gov)
  - Name and electronic or mailing address of the requester;
  - Name of the SDO;
  - Title of the VCS;
  - The VCS reference or SDO designation number and publication date (e.g., Q1234-2019);
  - Proposed list of products for which the standard could apply routinely;
  - Rationale for request; and
  - A brief description of the testing, performance, or other characteristics of the RMT product(s) or process(es) that would be addressed by the proposed standard.

# Final Remarks

- Stakeholders are encouraged to participate in standards development activities.
  - Identifying needed standards
  - Contributing content to standards
  - Commenting on draft standards
  
- FDA, NIST, and SCB collaborative activities support the development of standards for the SRP-RMT.
  
- SCB Standards Portal is an important tool for stakeholders
  - Knowledge of existing standards, standards under development, and needed standards.

# Questions and Answers

# Discussion Questions

- If a standard isn't accepted the first time it is submitted can the decision be appealed?
- Are there plans to coordinate with the CDER recognized standards for medical devices?
- Can standards that aren't on RMT specific topics but that might have relevance for RMT manufacturing be submitted?
- Is there any special way in your approval process that you have to denote or recognize that you are using a recognized standard?
- Can an international VCS be submitted?

**Thank you!**
